

Francis Tuttle Technology Center
Automotive Collision Repair Technology
Fall Advisory Committee Meeting
November 28, 2006

After Eating and Meeting with all T&I Advisory Committees The Auto Collision Committee Met in the Automotive Collision Repair Technology Classroom. Members present were: Bobby Durham, Doug Reinhardt, Ray McLain, Randy Tull, and Dennis Moore. Absent were Billy Lile, Jr. Wayno, Bill Dooley, and Jerry Ashcraft.

Dennis Moore opened the meeting with an overview of the program and Program Information Guide. Group went over the requirements for the different certificates in the program and the curriculum used. Members were asked for input on any changes they felt would benefit students going to work in the industry. Ray McLain commented about the need for technicians that would stay in the industry and how he would like to see our screening process be tightened up to get more students in the program that want to be in the Collision industry, not just in the program to get out of their home schools. The group agreed with him on this. Dennis Moore commented on the new process of Interviewing students he started last year and he thought that would help.

Doug Reinhardt suggested students be taught more on how to read an estimate so they could more understand what repairs were to be made on the job. He employees a former student and that was a weakness he could identify. Doug and several others volunteered to supply the program with estimates to use in training.

Dennis Moore acknowledged and thanked Ray McLain for his donations of paint and used bumpers to the school for training, and thanked all members present for their participation and support.

Meeting adjourned at 8:00 pm
