

World Regional Geography

GEOG 2603

Course Description: Geography is the study of spatial patterns over the surface of the Earth. In World Regional Geography we attempt to understand how these spatial patterns relate to one another by dividing the world into regions, correlating and interrelating phenomena such as natural environment, socioeconomic development, population, culture and geopolitics.

Course Objectives: Demonstrate both an understanding and application of basic concepts of geography. Identify and describe major world regions based on geographic phenomena. Develop both a basic knowledge of and appreciation for the diversity of peoples and places on Earth. Develop tools of thinking and scholarship. Inspire a desire to travel, observe and understand the world.

Note: This sample syllabus is being provided in order to give general knowledge of the subject and should not be considered the sole outline of the course. Class format, assignments, and due dates may vary by professor.
