

General Education Committee recommendations – FY 2016-2017

- The committee encourages faculty to emphasize the importance of quantitative reasoning, especially in drawing of logical conclusions from numerical answers.
- The committee encourages faculty with classes that require oral presentations, no matter what the length, to consider submitting one of those assignments as Public Speaking artifacts.
- Due to the growth in the number of artifacts collected, especially for writing and math method categories, the committee recommends increasing the number of faculty serving on these artifact evaluation teams:
 - That we add 3 more faculty to the current 6 faculty who are tasked to assess writing artifacts.
 - That we add 2 more faculty to the current 4 faculty who are tasked to assess math method artifacts.
